

SAS Case 13 - Output Statement

Problem Statement

In this case you'll select a subset of employees (only those employees in Divisions who division designations contain the number 5) using the JCL/SAS file and data of Case 12 (**YOUR_USER_ID.TRAINING.CASE12**). You will put the selected employees in a single data set.

Your Task

1. Start with the JCL/SAS file you used in Case 12.
YOUR_USER_ID.TRAINING.CASE12.
2. Use an IF statement to select employees in Divisions contain the number 5.
3. Print out the employee list with a PROC PRINT. Save the JCL and SAS code as file **YOUR_USER_ID.TRAINING.CASE13.**

When the SAS job runs successfully, print out:

1. The original JCL/SAS file (**YOUR_USER_ID.TRAINING.CASE13**).
2. The SAS listing (shown as SASLIST in IOF)

Purpose

To introduce you to the use of the output statement.
