

CS552 - Homework 3

UML Evaluation

Your boss recently went to yet another software engineering conference and came back really charged up about the idea of using UML based on a paper that was distributed at the conference. You have been asked to assess the paper and the approach. Your response should be not less than 750 words.

Your evaluation should briefly evaluate the pro's and con's as specified by the paper and make a recommendation on whether such an approach should be used by your company.

BB Software Memorandum

DATE: Wednesday, February 25

TO: You

FROM: S. Difenthaler

CC: A. Peligo
S. Purr
H. Palms

SUBJECT: Integrating Architectural Views in UML

I recently attended the International Software Engineering Gurus Conference (ISEGC) at USC in Los Angeles California and attended a talk on UML. The presenters at the conference made quite an effective presentation and made a recent paper of theirs available.

Please review the presenters paper (<http://pheattch.emporia.edu>) and give me a brief assessment of the article and their assessment of UML. Please speak specifically how we might integrate this approach in our development projects.

Thanks for your prompt attention to this matter. Please remember that you future at BB software depends on your timely response.
